## QuickPoll

### [Cement-retained vs screw-retained implant restorations](#)

Dental implant restorations are predominantly retained with either screws or cement. There are advantages and disadvantages to both types of retentions. Since the choice of using either method of retention is still ambiguous, the goal of this quick poll is to learn how you make decisions in your practice.

Please respond to the [5-question poll](#) regarding cement-retained vs. screw-retained implant restorations.
